DATA FROM A RECENT MULTI-CENTER PILOT
STUDY UTILIZING AXIOM WORLDWIDE'S
DRX9000™ REVEALS A DRAMATIC SUCCESS RATE
OF 88.9%!

Clinical results to be presented at the 2007 annual
conference of the American Academy of Pain
Management.

Tampa, FL September 5, 2007: The clinical results of an IRB-approved prospective, multi-center, phase II, non-randomized pilot study utilizing the DRX9000™ will be presented at the 18th Annual Clinical Meeting of the American Academy of Pain Management in Las Vegas, NV September 27- 30, 2007. The study, authored by Dr. John Leslie of The Mayo Clinic, was designed to evaluate the effectiveness and safety of the DRX9000 in the treatment of chronic lower back pain. Patients enrolled in the study had suffered an overall average of ten years of chronic back pain. After two weeks of treatments on the DRX9000 there was a 50% reduction in pain scores and upon completion of the entire six week protocol an amazing success rate of 88.9% was documented. The patients also reported an improvement in their Oswestry Disability score. Abstracts and copies of the presentation will be made available following the release of the study data at the American Academy of Pain Management.

The study was partially funded by Axiom Worldwide.
